Audiovisual Services for CCRI Commencement 2014

Questions and Answers

Questions:

- 1) What size boom lift will be required to reach all necessary rigging points, the rigging points are not included in the bid spec.
- 2) Will CCRI provide the necessary hardware to hang the stage drape? If not provided what is required?
- 3) Are load ratings available for the rigging points on the roof structure?
- 4) What is the earliest date to start the load in and set up?
- 5) Can the Saturday and Sunday be used as set up time?
- 6) What is the cutoff date and time for the load out and will these times be considered after the floor has been cleared of chairs or other that will allow the use of a moving lift.

Answers:

- 1) We have a 32 ft. scissor lift that goes straight up to the deck, the boom lift should be a 40-60 ft. lift, depending how far out they want to boom from.
- 2) We will hang the drape here in-house.
- 3) Load levels are currently not available.
- 4) The usual set up for lighting occurs on the Friday and Saturday before commencement (May 9th/10th).
- 5) Saturday and Sunday are available for set up (be aware, we MAY be doing our own setup those days in the field house as well during a first shift schedule).
- 6) Our commencement is May 16th. Any SCHEDULED time after that is good for removal. (There are multiple events in the field house following our commencement and have to schedule around those events).
